

Water Technologies

Wallace & Tiernan® Flow Measurement Equipment

TFE-Lined and PVC-Tube
Varea-Meter® Units
For Very Aggressive Chemicals

SIEMENS

Siemens Water Technologies offers a choice of two straight-through rotameters for metering difficult fluids and gases. The TFE-lined Varea-Meter® unit is designed to give long, dependable service metering aggressive chemicals at high temperatures and/or pressures. For lower temperatures and pressures where PVC is acceptable, the PVC-tube Varea-Meter® unit also gives excellent results metering aggressive chemicals.

Features

Exact Capacities

The float is custom weight loaded at the factory to give the desired full scale flow capacity – exactly.

True Straight-Through Design

Both meters feature straight-through construction. There are no guides, springs, or other obstructions. Only the float is in the path.

Easy to Change Readouts

The standard readout is in a magnetically coupled indicator unit. An optional Factory Mutual-approved, explosion-proof 4-20 mA transmitter is also available.

No Extensions, No Spool Pieces

There are no float extensions. In and out piping is vertical. No spool pieces are required at installation.

PVC Tube Varea-Meter® Unit

Key Benefits:

- User defined unique full scale capacity
- Unobstructed flow path
- Standard accuracy of $\pm 2\%$ FS; $\pm 1\%$ FS available
- Durable & reliable for metering aggressive fluids
- Wide range of capacities

TFE-Lined Varea-Meter® Unit

Features

Durable and Reliable with Aggressive Fluids

The well-known thermal- and chemical-resistant properties of TFE are added to the pressure-containing properties of flanged, stainless steel meter bodies. The combination offers excellent durability and reliability metering aggressive process chemicals.

Special Design

The TFE-lined Varea-Meter® unit is not an adaptation of a standard stainless steel tube rotameter. It was developed from the beginning as a lined meter. Therefore it readily adapts to conventional metal, plastic, or lined pipe systems.

Maximum Corrosion Resistance

All wetted parts are corrosion-resistant material. The TFE flange gaskets supplied are envelope types. The tube liner, tube insert, and float are TFE. The float metering disc can be tantalum, Hastelloy® C, or Kynar®.

PVC-Tube Varea-Meter® Unit

Features

Long Life with Aggressive Fluids

The Type I, Grade I PVC metering tube gives long life with aggressive chemicals such as hydrochloric acid and hypochlorite solutions.

Low Cost

For low temperature and pressure service where PVC is acceptable this meter will give excellent service at low initial cost.

Technical Data

Accuracy – 2% of full scale with standard calibration. Special calibration to 1% of full scale.

Range – 10 to 1.

Temperature-Pressure Rating

TFE-Lined Meter:

Maximum pressure: 275 PSI

Maximum temperature: 300° F.

PVC-Tube Meter:

Maximum pressure: 200 PSI

Maximum temperature 150° F.

Mounting

Vertical, in-line.

Connection

TFE meter: 150 lb flanges. Flange gaskets are TFE jacketed steel and nobestos.

PVC meter: 150 ANSI flat-faced flanges.

Calibration Units

Percent of maximum flow is standard. GPM for water, SCFM for air, and other graduations are optional. Scale length is 6 inches.

Materials of Construction

TFE meter: Flanges are 316 stainless; metering tube is 304 stainless with 1/16-inch TFE liner; the tapered insert is TFE; the float is all TFE with Hastelloy® C, tantalum, or Kynar® metering disk; the flange gaskets are TFE jacketed steel and nobestos.

PVC meter: the metering tube and float body are Type I, Grade I PVC. Metering disk is Hastelloy® C, tantalum, or Kynar®.

TFE-Lined Varea-Meter® Unit

PVC-Tube Varea-Meter® Unit

Selection Procedure

How to Size PVC and TFE Meters for Gas Service

If the gas is other than air or is air other than STP (14.7 psi and 70°F), its flow rate must be converted to equivalent scfm air.

1. Convert flow units to scfm:

a. for flow rate given in cfm:

$$\text{cfm} \times \frac{(14.7 + \text{psig}) \times 530}{14.7 \times (460 + F)} = \text{scfm}$$

b. for flow rate given in pounds per minute:

$$\text{ppm} \times \frac{13.31}{\text{gas sp. gravity}} = \text{scfm}$$

2. Convert scfm flow to equivalent flow:

Multiply scfm by selected correction factors for operating pressure from Table A, operating temperature from Table B, and specific gravity from Table C.

Table A

Operating Pressure Correction Factor					
$X_p^* = \sqrt{\frac{14.7}{14.7 + \text{psig}}}$					
Oper. Press. "Hg. Vac.	Factor X _p	Oper. Press. psig	Factor X _p	Oper. Press. psig	Factor X _p

1.103 (Oxygen)	1.049		

Selection Procedure

How to Size PVC and TFE Meters for Liquid Service

- Convert flow units to gpm (Table D).
- From Table E or F, select the column with the specific gravity value nearest to that of the liquid in question. Find the gpm range that includes the flow rate desired. The correct meter size will be found in the far left column. (The capacity table indicates an upper and a lower maximum range of flow capacities available. For example, a PVC meter with 1/2-10 tube used for a liquid specific gravity of 1.0 has a minimum full scale capacity of 0.66 gpm and a maximum full scale capacity of 1.11 gpm. Any full scale flow between 0.66 and 1.11 gpm can be provided.)

Table D

Flow Conversion Factors For Liquids	
cc per minute x 2.642x10 ⁻⁴	} = gpm
liters per minute x 0.2642	
cubic feet per minute x 7.1481	
pounds per minute x $\frac{0.1201}{\text{sp. gr.}}$	

Table E

*Actual capacity has an upper and lower limit to determine full scale based on the loaded float weight determined by maximum desired flow rate between the lower and upper limit.

Table G - Ordering Procedures For Tubes and Floats

Basic Arrangement

1 - Output

Code	Description
0	Indicator Only (Standard)
1	Indicator with GP Integral Switch for low flow alarm
2	Indicator with I.S. Integral Switch for low flow alarm
7	Indicator with GP Integral Switch for high flow alarm
8	Indicator with I.S. integral Switch for high flow alarm

2 - Tube Type

Code	Description
V	PVC
T	TFE-Lined

3 - Meter Body

Code	Description
4	PVC
7	TFE-Lined Stainless Steel

4 - Tube Size

Select tube code from shaded area in Table E for PVC model or Table F for TFE model.

5 - Electronic Transmitter or Exterior Flow Switch*

Electronic Transmitter	
Code	Description
6	HAZ. 4-20 mA 2-Wire X-mitter
Exterior Flow Switch	
Code	Description
X	None (Standard)
A	GP 1 Switch
B	GP 2 Switches
C	GP 1 Switch / 1 Relay
D	GP 2 Switches / 2 Relays
G	HAZ. 1 Switch / 1 Relay
H	Haz. 2 Switches / 2 Relays

*Select either Electronic Transmitter or Exterior Flow Switch.

6 - Optional

Code	Description
T	Glass Window
U	Plastic Window (Standard)

7 - Scale

Code	Description
D	Standard % Air
B	Special Gas
P	Standard % Water
I	Special Liquid

8 - Float

Select float code from shaded area in Table E for PVC model or Table F for TFE model.

9 - Float Disc Material

Code	Description
T	Tantalum
H	Hastelloy® C
K	Kynar®

10 - Tag

Code	Description
X	None (Standard)
1	Stainless Steel

11 - Voltage for Barrier (Integral Switch Only)

Code	Description
X	None (Standard)
1	24V (GP model only)
2	120V
3	240V

Ordering Procedure

Example

To order a 1/2" PVC-tube meter with indicator only with plastic window, PVC float with Kynar® metering disc, having a maximum capacity of 2.0 GPM water and percent scale specify:

522 0 V A 4 0 08 X U P B20V K X X

ELECTRONIC TRANSMITTER

The Wallace & Tiernan® Products Varea-Com™ explosion-proof Electronic Transmitter provides accurate magnet angle detection and computation of the angle to a 4-20 mA industry standard output signal. This compact, microprocessor-driven device is capable of filling flow-correction needs at the meter, providing accurate flow information remotely to external support systems. The patented magnetic sensor with automatic gain control enables a high dynamic capture range without sacrificing accuracy.

Electronic Flow Transmitter mounted on meter body

Features

Separate Flow Indication

The scale and pointer readout is independent of the transmitting mechanism. The pointer indicates flow rate even if the transmitting element is removed or if power fails.

Easy Addition in Field

Any model can be ordered mounted on a new meter or can be easily added to an already-installed meter. Field installation requires calibration to the meter.

Design and Features

- NEMA 4, FM-Approved Hazardous Area enclosure
- Smart, microprocessor-based field transmitter; 2-wire, low power
- Patented sensor with micro-processor-controlled gain
- 4-20 mA Analog Output for magnetic angle signaling. Voltage range: 8.28 VDC
- 11-calibration-point transmitter linearization and storage in nonvolatile memory
- External Zero Button Wire
- Adjustable low-cutoff
- Adjustable low-pass filter
- PC-interface (no external power required)
- Accuracy better than 0.5% (over the range from 0.0 to 360.0 degrees, pick-up accuracy ~0.1 degree)
- Electronics designed to meet international certifications and CE requirements.

Technical Data

Accuracy – Combined meter and transmitter accuracy is 2% of full scale (1% with custom calibration).

Sensitivity – 0.2% of full scale.

Repeatability – 0.3% of full scale.

Speed of Response – Complete response to a flow-rate change in 0.5 seconds.

Output Signals – 4-20 mA DC flow proportional.

Electrical Requirements

- Input: 24 VDC
- Current Consumption: 5 mA signal current.

Temperature Range – Maximum fluid temperature is 300°F; ambient range is -13 to 140°F.

Electrical Classification

As an explosion-proof arrangement, the transmitter is FM-approved as explosion-proof for Class I, Division 1, Group A, B, C, and D hazardous locations; and FM-approved as dust-ignition-proof for Class II, Division 1, Group E, F and G hazardous locations; suitable for Class III, Division 1.

Connections – Enclosed 1/2" conduit connection. Transmitter to receiver, unshielded wires.

Dimensions – For complete dimensions, please refer to literature:

- WT.520.215.108.UA.CN

Electronic Transmitter

EXTERNAL FLOW SWITCH

The Wallace & Tiernan® External Flow Switch is a compact option that gives reliable high- and/or low-flow switching. The External Flow Switch contains a powerful rotating magnet that responds linearly to float position. Its switches are long life, hermetically sealed reed types. Almost frictionless rotation of the switch magnet and its powerful bond with the float magnet give a dependable magnetic coupling. Even under sudden flow surges, switching remains reliable.

External general purpose flow switch mounted on meter body

Features

- Available in General Purpose arrangement or UL Listed Hazardous Location version.
- Easily retrofitted in the field with the meter in line.
- Switches can be set to open or close on increasing or decreasing flow.
- A simple adjustment sets each switch independently over 0 to 100% of the flow range.

Technical Data

Repeatability – 0.6% of full scale.

Electrical Ratings

- Series 5600 General Purpose: one or two switches rated 250 mA at 48 VDC or 120 VAC resistive or 50 mA at 48 VDC or 120 VAC inductive; one or two single-pole, double-throw relays rated 10 amperes at 28 VDC or 120 VAC; coil supply 120 VAC, 50/60 Hz.
- Series 5500 Hazardous Location: one or two single-pole, double-throw relays rated 10 amperes at 120 VAC; coil supply 120 VAC, 50/60 Hz. UL-listed for Class I, Division 1 & 2 Groups C and D or Class II, Division 1 & 2 Groups C and D or Class II, Division 1 & 2 Group E, F, and G.

Temperature Limits – Ambient, -20° to 120° F.

Actuating Time – Reed switches open in one millisecond.

Enclosures – Heavy cast aluminum (NEMA 4) with corrosion resistant finish.

Dimensions – For complete dimensions, please refer to literature:

- WT.520.215.102.UA.CN
- WT.520.215.104.UA.CN
- WT.520.215.110.UA.CN
- WT.520.215.112.UA.CN

Flow switch with switches and relays

INTEGRAL FLOW SWITCH

The Wallace & Tiernan® Integral Flow Switch is a low-cost switch that mounts inside the meter's indicator and enables remote monitoring of either high or low set points. The switch is housed in the indicator, which is in a NEMA 4 enclosure with a plastic window; a glass window is available as an option. There is also an FM-approved, intrinsically safe arrangement with a power supply and an integral (to the power supply) relay available for Class I, II & III, Division 1 & 2 hazardous areas.

Integral flow switch
(shown with cover removed)

Features

Alarm Operation

The user can easily set the switching point by removing the indicator cover and moving the switch pointer tip (located in the slot) to the desired set point. Any value along the slot can be used as the desired set position. The placement of the pointer tip provides a local and visual indication of the set point. The disc mounted on the indicator needle actuates the limit switch within the housing. This compact, inexpensive switch gives a reliable high- or low-flow signal even under sudden flow surges. The alarm can be set to open or close on increasing or decreasing process flow.

Technical Data

Specifications

- Electrical Classification: NEMA 4 for General Purpose; Intrinsically Safe for Hazardous Areas
Class I, Div. 1 Haz Group A, B, C, D
Class II, Div. 1 Haz Group E, F, G
Class III, Div. 1 in accordance with Instruction Book Dwg. 520.209.130.040
- Supply Voltage:
NEMA 4 30 VDC or less
Intrinsically Safe 24 VDC, 120 VAC or 240 VAC (based on barrier selected)

Repeatability

Intrinsically Safe Alarm: ≤ .0004 in. of the set point.

General Purpose Alarm: ≤ .0002 in. of the set point.

Ambient Operating Temperature

NEMA 4 -13 to 131° F

Intrinsically Safe -13 to 140° F

Shipping Weights (lbs.)

Meter with Indicator
