TZIDC-110
Electro-Pneumatic Positioner

Compact, well-proven, and flexible

For PROFIBUS PA
Low operating cost
Compact design
Well-proven technology
Robust and environmentally ruggedized

Wide operating temperature range
— -40 ... 85 °C (-40 ... 185 °F)
Easy to commission, “single pushbutton” operating philosophy
Mechanical position indicator
ATEX, FM, CSA, GOST and IECEX approvals
Electro-Pneumatic Positioner TZIDC-110

1 Description
The TZIDC-110 is an electronically configurable positioner with communication capabilities designed for mounting to pneumatic linear or rotary actuators. It features a small and compact design, a modular construction, and an excellent cost-performance ratio. Fully automatic determination of the control parameters and adaptation to the final control element yield considerable time savings and an optimal control behavior.

1.1 Pneumatics
An I/P module with subsequent pneumatic amplifier is used to control the pneumatic actuator. The well-proven I/P module proportionally converts the permanent electrical positioning signal from the CPU into a pneumatic signal used to adjust a 3/3-way valve. The air flow for pressurizing or depressurizing the actuator is continuously adjusted. As a result, excellent control is achieved. When reaching the set point, the 3/3-way valve is closed in center position to minimize the air consumption.
Four different pneumatics versions are available: for single-acting or double-acting actuators, each with “fail-safe” or “fail-freeze” function.

1.1.1 “Fail-safe” function
If the electrical power supply fails, the positioner output 1 is depressurized, and the pneumatic actuator’s return spring moves the valve to the defined safe position. In case of a double-acting actuator the second output 2 is additionally pressurized.

1.1.2 “Fail-freeze” function
If the electrical power supply should fail, the positioner output 1 (and 2, if applicable) is closed and the pneumatic actuator stops (“freezes”) the valve in the current position. If compressed air supply should fail, the positioner depressurizes the actuator.

1.2 Operation
The positioner has a built-in operating panel providing a 2-line LCD and 4 pushbuttons for optimal local configuration, commissioning and operational monitoring. Alternatively, the appropriate configuration program and the available communication option can be used.

1.3 Communication
Communication with the TZIDC-110 positioner occurs via PROFIBUS PA.

1.4 Modular design
The TZIDC-110 basic model can be enhanced at any time by retrofitting optional equipment. Option modules for analog or digital position feedback can be installed. Additionally, a mechanical position indicator, proximity switches or 24 V microswitches are available for indicating the position independently of the mother board function.
Electro-Pneumatic Positioner TZIDC-110
for PROFIBUS PA

Fig. 1: TZIDC-110 schematic diagram

Basic model
1  Bus connector
2  Supply, 1.4 ... 6 bar
3  Exhaust
4  I/P module with 3/3-way valve
5  Position sensor (optional up to 270° rotation angle)

Optional upgrades
6  Mechanical position indicator
7  Mechanical feedback with proximity switches
8  Mechanical feedback with microswitches 24 V

Important
With optional upgrades either the “mechanical feedback with proximity switches” (7) or the “mechanical feedback with microswitches 24 V” (8) can be used.

In both cases, the “mechanical position indicator” (6) must be installed.
2 Mounting versions

2.1 To linear actuators in accordance with the standard
Lateral attachment is in accordance with DIN / IEC 534 (lateral attachment to NAMUR). The required attachment kit is a complete set of attachment material, but does not include the screwed pipe connections and air pipes.

2.2 To rotary actuators in accordance with the standard
This attachment is designed for mounting according to the standard VDI / VDE 3845. The attachment kit consists of a console with mounting screws for mounting on a rotary actuator. The adapter for coupling the positioner feedback shaft to the actuator shaft has to be ordered separately. Screwed pipe connections and air pipes have to be provided on site.

2.3 Integral mounting to control valves
The TZIDC-110 positioner featuring standard pneumatic action is available as an option for integral mounting.
The required holes are found at the back of the device.
The benefit of this design is that the point for mechanical stroke measurement is protected and that the positioner and actuator are linked internally. No external tubing is required.

2.4 Special actuator-specific mounting
In addition to the mounting methods described above, there are special actuator-specific attachments.
Please contact us for details.
Fig. 2: Mounting options

1. Mounting to linear actuators acc. to DIN / IEC 534
2. Mounting to rotary actuators to VDI / VDE 3845
3. Integral mounting to control valves
4. Integral mounting to control valves by using an adapter panel
3 Operation

3.1 General
Microprocessor-based position control in the TZIDC-110 provides for optimal results. The positioner features high-precision control functions and high operational reliability. Due to their elaborate structure and easy accessibility, the device parameters can be quickly adapted to the respective application.

The total range of parameters includes:
- Operating parameters
- Adjustment parameters
- Monitoring parameters
- Diagnosis parameters
- Maintenance parameters

3.1.1 Operating parameters
Signal range 0 ... 100%
Subranges are configurable, min. range 20 %
Recommended range > 50 %

Action (positioning signal)
Increasing: Positioning signal 0 ... 100 % = direction 0 ... 100 %
Increasing: Positioning signal 0 ... 100 % = direction 100 ... 0 %

Characteristic curve (travel = f {signal})
Linear, equal percentage 1:25 or 1:50 or 25:1 or 50:1 or freely configurable with 20 reference points.

Travel limit
The positioning travel, i.e. the stroke or angle of rotation, can be reduced as required within the full range of 0 ... 100 %, provided that a minimum value of 20 % is observed.

Shut-off function
This parameter can be set separately for each end position. When the respective configured limit value is exceeded, the shut-off function causes immediate travel of the actuator until reaching the set end position.

End Position Behavior
Selection option for behavior when moving into the end position. Either the positioner additionally pressurizes the actuator and reaches full actuating force in the end position, or it continues to control the actuator in the end position and pressurizes the actuator only as much as is required to maintain the position.

Travel time prolongation
This function can be used to increase the max. travel time for full travel. This time parameter can be set separately for each direction.

Important
This function can only be used with the pneumatics with the safety function “fail-safe”.

Switching points for the position
This parameter allows you to define two position limits for signaling (see option “Module for digital position feedback”).

3.1.2 Adjustment parameters
The TZIDC-110 positioner has a special function for automatic adjustment of the parameters.
Additionally, the control parameters can be set manually to optimally adapt them to the process requirements.

Tolerance band
When reaching the tolerance band the position is considered as corrected. From this point on, the position is further slowly re-adjusted until the dead band is reached. The factory setting for this parameter is 0.3 %.

Dead band (sensitivity)
When reaching the dead band, the position is held. The factory setting for this parameter is 0.1 %.

Actuator spring action
Selection of the sensor shaft rotating sense (looking into the open case), if the valve is moved to the safe position by the actuator spring (actuator is depressurized via Y1/OUT1).
For double-acting actuators the actuator spring action corresponds to pressurizing the pneumatic output (OUT2).

Display 0 ... 100 %
Adjusting the display (0 ... 100%) according to the direction of action for opening or closing the valve.

3.1.3 Monitoring parameters
Various functions for permanent operational monitoring are implemented in the TZIDC-110 operating program, e.g.:
- Internal positioning time-out
- Sensor monitoring
- Backup monitoring

While automatic commissioning is in progress, the current state is continuously indicated on the integrated LCD. Remaining messages can be retrieved via the user interface.
The fieldbus enables users to implement enhanced monitoring in the control system. A special window displays the most important process variables ONLINE such as the positioning signal (in %), the position (in %), the control deviation (in %) as well as the status messages.
3.1.4 Diagnosis parameters

The diagnosis parameters of the TZIDC-110 program inform the operator about the operating conditions of the valve. From this information the operator can derive which maintenance works are required, and when. Additionally, limit values can be defined for these parameters. When they are exceeded, an alarm is reported. The following values are e.g. determined:
- Number of movements performed by the valve
- Total travel
The diagnostic parameters and limit values can be called up, set and reset using the configuration program.

3.2 Operator panel

The TZIDC-110 positioner's operator panel with four pushbuttons allows for
- operational monitoring
- manual control
- configuration
- fully automatic commissioning
The operator panel is protected by a cover which avoids unauthorized access to the operating elements.

3.2.1 Single-button commissioning

Commissioning the TZIDC-110 positioner is especially easy. The standard Autoadjust function for automatic adaptation of the device parameters can be started by simply pressing a single front panel button, and without knowing parameterization details. Depending on the selected actuator type (linear or rotary), the displayed zero position is automatically adapted:
- for linear actuators counter-clockwise (CTCLOCKW)
- for rotary actuators clockwise (CLOCKW).
Besides this standard function, a customized “Autoadjust” function is available. The function is launched either via the operator's panel or the configuration program.

3.2.2 Display

The information indicated by the 2-line LCD is permanently updated and adapted during operation, to inform the operator in an optimal way. During control operation the following TZIDC-110 data can be called up by pressing the pushbuttons briefly:

<table>
<thead>

4 Communication

4.1 General
PROFIBUS is a manufacturer-independent, open fieldbus standard for use in the manufacturing industry and process automation. It is ideally suited for time-critical applications with high transmission rates as well as for complex communication activities. The flexible structure allows the mechanical mount and transmission speed to be easily adapted to the specific application. A standard communication protocol is used on a universal basis.

4.2 PROFIBUS PA
PROFIBUS PA was developed primarily for process automation solutions. The transmission method (physical layer in the ISO/OSI model) complies with IEC 61158. The power supply for the field devices is provided concurrent with signal transmission via the fieldbus line. PROFIBUS PA is also suited for use in explosion-proof installations.

4.3 Benefits of PROFIBUS communication
- Standardized device profiles ensure interoperability of devices from various manufacturers
- Acyclic access to device data (even during operation) for configuration, diagnostics and service
- High system uptimes based on comprehensive device and bus diagnostics as well as default value strategies in the event of an error
- Support for efficient facility management through provision of operating values

4.4 Positioner TZIDC-110 for PROFIBUS PA
The TZIDC-110 positioner complies with the Profibus PA profile for process devices “Electro-pneumatic actuators V3.0”. This ensures interoperability in connection with third-party control systems. In conformance with PROFIBUS conventions, data can be output during cyclic data transfer in operating modes AUT, MAN or RCAS and can be written in operating mode O/S (out-of-service). Newly set parameters are saved in the non-volatile memory directly upon download to the device, and become active immediately.

4.5 Device management for TZIDC-110
For the TZIDC-110, a graphic user interface known as the “DTM” is available. The DTM is based on FDT/DTM technology (FDT 1.2) and can be integrated in a control system as well as a separate PC with the DVS401 configuration software (SMART VISION). The device can thus be commissioned, operated and serviced from a single user interface.

Fig. 5: Communication via PROFIBUS
5 Specifications

5.1 Communication

Profiles
- Profibus PA profile for process devices
- Electro-pneumatic actuators V3.0

Block types
- 1 AO Functional block
- 1 Transducer block
- 1 physical block

Physical Layer
- In compliance with IEC 61158-2

Transmission rate
- 31.25 Kbit/s

Supply voltage
- Power feed from the PA bus, 9.0 ... 32.0 V DC

Max. permissible voltage
- 35 V DC

Power consumption
- 10.5 mA

Current in the event of an error
- 15 mA (10.5 mA + 4.5 mA)

5.2 Designation

Device name
- TZIDC-X10

PNO ID no.
- 0x0639

Dev. ID
- 0x3200028xyz

Bus address
- Between 0 and 126, default address 126

5.3 Output

Range
- 0 ... 6 bar (0 ... 90 psi)

Air capacity
- at 1.4 bar (20 psi) supply pressure
  - 5.0 kg/h = 3.9 Nm³/h = 2.3 scfm
  - at supply pressure of 6 bar (90 psi)
  - 13 kg/h = 10 Nm³/h = 6.0 scfm

Output function
- For single or double-acting actuators, air is vented from actuator or actuator is blocked in case of (electrical) power failure

Shut-off values
- end position 0 % = 0 ... 45 %
- end position 100 % = 55 ... 100 %

5.4 Travel

Rotation angle

- Used range
  - 25 ... 120°
  - 25 ... 60°
- rotary actuators, optionally 270°
- linear actuators

Travel time prolongation
- Setting range
  - 0 ... 200 seconds, separately for each direction

5.5 Air supply

Instrument air
- free of oil, water and dust to DIN/ISO 8573-1. Pollution and oil content according to Class 3 (purity: max. particle size = 5 µm, max. particle density = 5 mg / m³; oil content: max. concentration = 1 mg / m³; pressure dew point: 10 K below operating temperature)

Supply pressure
- 1.4 ... 6 bar (20 ... 90 psi)

IMPORTANT (NOTE)
- Do not exceed the maximum operating pressure of the actuator!

Air consumption
- < 0.03 kg/h / 0.015 scfm (independent of supply pressure)

5.6 Transmission data and influences

Output Y1

Increasing:
- Increasing output signal 0 ... 100 %
- Increasing pressure at output Y1

Decreasing:
- Decreasing output signal 0 ... 100 %
- Decreasing pressure at output Y1

Characteristic deviation
- ≤ 0,5 %

Tolerance band
- 0.3 ... 10 %, adjustable

Dead band
- 0.1 ... 10 %, adjustable

Resolution (A/D conversion)
- > 16000 steps

Sample rate
- 20 ms

Influence of ambient temperature
- ≤ 0.5 % per 10 K

Influence of vibration
- ≤ ± 1 % to 10 g and 80 Hz

Seismic requirements
- Meets requirements of DIN / IEC 68-3-3 Class III for strong and strongest earthquakes.

Influence of mounting orientation
- Not measurable.

Meets the requirements of the following directives
- EMC Directive 2004/108/EC
- EC Directive for CE conformity marking

5.7 Environmental capabilities

Ambient temperature
- For operation, storage and transport:
  - -40 ... 85 °C (-40 ... 185 °F)

Relative humidity
- Operational (with closed housing and air supply switched on):
  - 95 % (annual average), condensation permissible
- Transport and storage:
  - 75 % (annual average), non-condensing
5.8 Housing

Material / Degree of protection
Aluminum with ≤ 0.1 % copper, protection class IP 65 (optional IP 66) / NEMA 4X

Surface / Color
Electrostatic dipping varnish with epoxy resin, stove-hardened. Case varnished black, RAL 9005, matte, housing cover Pantone 420.

Electrical connections
Screw terminals: Max. 1.0 mm² (AWG 17) for options
Max. 2.5 mm² (14 AWG) for bus connector

**IMPORTANT (NOTE)**
Do not expose the terminals to strain.

Four thread combinations for cable entry and pneumatic connection
- Cable: thread 1/2-14NPT, air pipe: thread 1/4-18 NPT
- Cable: thread M20 x 1.5, air pipe: thread 1/4-18 NPT
- Cable: thread M20 x 1.5, air pipe: thread G 1/4
- Cable: thread G 1/2, air pipe: thread Rc 1/4
(Optional: With cable gland(s) and pipe plugs if necessary)

Weight
1.7 kg (3.75 lb)

Mounting orientation
Any

5.9 Options

Digital position feedback with proximity switches
Two proximity switches for independent position signaling. Switching points adjustable between 0 … 100 %

Current circuits acc. to DIN 19234 / NAMUR
Supply voltage 5 ... 11 V DC
Signal current < 1 mA Switching state logical "0"
Signal current > 2 mA Switching state logical "1"

Direction of action (logical state)

<table>
<thead>
<tr>
<th>Proximity switch</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>&lt; Lim. 1</td>
</tr>
<tr>
<td>SJ2-SN (NC)</td>

</tbody>
</table>

Digital position feedback with 24 V microswitches
Two microswitches for independent position signaling. Switching points adjustable between 0 … 100 %.

Voltage max. 24 V AC / DC
Load rating max. 2 A
Contact surface 10 µm Gold (AU)

Mechanical position indicator
Indicator disk in enclosure cover, linked with positioner feedback shaft.

**IMPORTANT (NOTE)**
These options are also available for retrofitting by Service.

5.10 Accessories

Mounting material
- Attachment kit for linear actuators to DIN/IEC 534 / NAMUR
- Attachment kit for rotary actuators to VDI / VDE 3845
- Attachment kit for integral mounting to control valves
- Attachment kit for actuator-specific attachment upon request

Pressure gauge block
- With pressure gauges for supply and output pressure.
- Pressure gauges with housing ø 28 mm (1.1 inch), with connection block in aluminum, black
- Installation material for mounting on positioner

Filter regulator
All metal version in brass, varnished black, bronze filter element (40 µm) and condensate drain.
Max. pre-pressure 16 bar (232.06 psi), output adjustable to 1.4 ... 6 bar (20 ... 90 psi)

PC software for configuration and operation
DSV401 (SMART VISION) with DTM available on CD-ROM

---

1) The proximity switches or 24 V microswitches for digital feedback are activated directly via the positioner axis and can only be used in combination with the optionally available mechanical position indicator.

Special requirements

- Devices may only be connected to circuits in zone 2 if they are suitable for operation in zone 2 potentially explosive atmospheres and for the conditions prevailing at the installation location (manufacturer's declaration or certificate from an inspection authority).

- For the "digital feedback with proximity switches" circuit, external measures must be implemented to prevent the rated voltage from being exceeded by more than 40 % in the event of transient disturbances.

- It is only permissible to connect, disconnect and switch live circuits during installation or maintenance, or for the purpose of carrying out repairs. Note: It is considered very unlikely that a potentially explosive atmosphere would be present in zone 2 at the same time that installation or maintenance/repair work was being carried out.

- Only non-flammable gases may be used for the pneumatic power supply.

- Only use suitable cable entries that meet the requirements of IEC 60079-15.

| | Lc = 100 uH |

| Terminals 51 / 52 | U max = 16 V |
| | I max = 20 mA |
| | Cc = 60 nF |
| | Lc = 100 uH |

IMPORTANT (NOTE)
- The "x" in P/N denotes minor mechanical variations or optional features.
- Local communication interface LKS shall not be used in hazardous location.
- Each pair of conductors of each intrinsic safety circuit shall be shielded.

6.3.2 CSA Certification Record

Certificate: 1649904 (LR 20312)
Class 2258 04
PROCESS CONTROL
EQUIPMENT – Intrinsically Safe,
Entity – For Hazardous Locations

Class I, Div 1, Groups A, B, C and D;
Class II, Div 1, Groups E, F, and G,
Class III, Div 1, Enclosure Type 4X:

Model TZIDC-110, P/N V18346-x032x2xx0x Intelligent Positioner

| Input rated | 32 V DC; max. 15 mA (powered by a SELV circuit) |
| Terminals 11 / 12 | V max = 24 V |
| | I max = 250 mA |
| | Cc = 2.8 nF |
| | Lc = 7.2 uH |

| Terminals 85 / 86 | U max = 30 V |
| | I max = 50 mA |
| | Cc = 3.8 nF |
| | Lc = 0 uH |

| Terminals 41 / 42 | U max = 16 V |
| | I max = 20 mA |
| | Cc = 60 nF |
| | Lc = 100 uH |

When installed per installation Drawing No 901265
Temperature Code | T4
Max. Ambient | 85 Deg C

IMPORTANT (NOTE)
- The "x" in P/N denotes minor mechanical variations or optional features.
- Local communication interface LKS shall not be used in hazardous location.
- Each pair of conductors of each intrinsic safety circuit shall be shielded.

c = 0
d = Optional mechanical kit for digital position feedback – 0, 1 or 3
e = Design (varnish/coding) – 1 or E

Equipment Ratings:
TZIDC-110
Intrinsically safe, Entity and FISCO, for Class I, II and III, Division 1,
Applicable Groups A, B, C, D, E, F, G; nonincendive for Class I,
Division 2,
Group E, F and G hazardous (classified) indoor and outdoor NEMA 4x
locations.

The following temperature code ratings were assigned for
the equipment and protection methods described above:

- T6 in ambient temperatures of 40 °C
- T5 in ambient temperatures of 55 °C
- T4 in ambient temperatures of 85 °C
FISCO rules

The FISCO Concept allows the interconnection of intrinsically safe apparatus to associated apparatus not specifically examined in such combination. The criterion for such interconnection is that the voltage (Vrmax), the current (Iimax) and the power (Pi) which intrinsically safe apparatus can receive and remain intrinsically safe, considering faults, must be equal or greater than the voltage (Uo, Voc, Vt), the current (Io, Isc, It) and the power (Po) which can be provided by the associated apparatus (supply unit). In addition, the maximum unprotected residual capacitance (C1) and inductance (L1) of each apparatus (other than the terminators) connected to the Fieldbus must be less than or equal to 5nF and 10µH respectively.

In each I.S. Fieldbus segment only one active source, normally the associated apparatus, is allowed to provide the necessary power for the Fieldbus system. The allowed voltage (Uo, Voc, Vt) of the associated apparatus used to supply the bus must be limited to the range of 14V d.c. to 24V d.c. All other equipment connected to the bus cable has to be passive, meaning that the apparatus is not allowed to provide energy to the system, except to a leakage current of 50µA for each connected device. Separately powered equipment needs a galvanic Isolation to ensure that the intrinsically safe Fieldbus circuit remains passive.

The cable used to interconnect the devices needs to comply with the following parameters:

- Loop resistance R: 15...150Ω/km
- Inductance per unit length L: 0.4...1mH/km
- Capacitance per unit length C: 80...200nF/km
- C = C' line/line + 0.5C' line/screen, if both lines are floating
- or
- C = C' line/line + C' Line/screen, if the screen is connected to one line
- Length of spare cable: max. 30m
- Length of trunk cable: max. 1km
- Length of splice: max. 1m
- Terminators

At each end of the trunk cable an approved line terminator with the following parameters is suitable:

- R = 90...100Ω
- C = 0...2.2µF

System evaluation

The number of passive devices like transmitters, actuators, connected to a single bus segment is not limited due to F.S. Reasons. Furthermore, if the above rules are respected, the inductance and capacitance of the cable need not to be considered and will not impair the intrinsic safety of the installation.
Installation Notes For FISCO and Entity Concepts:

1. The Intrinsic Safety Entity concept allows the interconnection of FM/CSA Approved Intrinsically safe devices with entity parameters not specifically examined in combination as a system when:

   \[ U_0 \text{ or } V_0 \leq \text{Vmax}, \text{I}_0 \text{ or } \text{Iac} \leq \text{Imax}, \text{P}_0 \leq \text{P}_i, \text{C}_i \text{ or } \text{C}_0 \leq \text{Z}_0 \text{ or } \text{Z}_C \text{ cable} \]

   For inductance use either \( L_0 \text{ or } \text{Lo} \geq \text{Z}_0 \text{ or } \text{Z}_C \text{ cable} \) or \( L_0 \text{ or } \text{Re} \leq \text{(La} / \text{Ra or Lo} / \text{Ro}) \) and \( L_0 \text{ or } \text{Re} \leq \text{(La} / \text{Ra or Lo} / \text{Ro}) \)

2. The Intrinsic Safety FISCO concept allows the interconnecting of FM/CSA Approved Intrinsically safe devices with FISCO parameters not specifically examined in combination as a system when:

   \[ U_0 \text{ or } V_0 \leq \text{Vmax}, \text{I}_0 \text{ or } \text{Iac} \leq \text{Imax}, \text{P}_0 \leq \text{P}_i \]

3. Control equipment connected to the Associated Apparatus must not use or generate more than 250 Vrms or Vdc.

4. Installation should be in accordance with ANSI/ISA S88.1 (except chapter 5 for FISCO Installations)

   "Installation of Intrinsically Safe System for Hazardous (Classified) Locations" and the National Electrical Code® (ANSI/NFPA 70) Sections 504 and 505.

5. The configuration of associated Apparatus must be Factory Mutual Research & Canadian Standards Association Approved under the associated concept.

6. Associated Apparatus manufacturer's installation drawing must be followed when installing this equipment.

7. No revision to drawing without prior Factory Mutual Research Approval/Canadian Standards Association.

8. Special conditions for safe use

   The operation of the local communication interface (LKS) and of the programming interface (X5) is only allowed outside of the Hazardous explosive area.

NONINCENDIVE, CLASS I, DIV. 2, GROUP A, B, C, D, AND FOR CLASS II AND III, DIV. 1 & 2, GROUP E, F, G

HAZARDOUS LOCATION INSTALLATION.

1. Install per National Electrical Code (NEC) using threaded metal conduit. Intrinsic safety barrier required. Max. Supply voltage 30 V. For T-code see table.

2. A dust tight seal must be used at the conduit entry when the positioner is used in a Class II & III Location.

3. WARNING: Explosive Hazard – do not disconnect equipment unless power has been switched off or the area is known to be Non-Hazardous.

   WARNING: Substitution of components may impair suitability for hazardous locations.
